**Lean Solutions** James P. Womack, Daniel T. Jones, 2009-12-01 Womack and Jones deconstruct the broken producer-consumer model and show businesses how to repair it, by providing the full value consumers desire from products without wasting time or effort. Why is it that, when our computers or our cell phones fail to satisfy our needs, virtually every interaction with help lines, support centers, or any organization providing service is marked with wasted time and extra hassle? In their bestselling business classic *Lean Thinking*, James Womack and Daniel Jones introduced the world to the principles of lean production—principles for eliminating waste during production. Now, in *Lean Solutions*, the authors establish the groundbreaking principles of lean consumption, showing companies how to eliminate inefficiency during consumption. *Lean Solutions* is full of surprising success stories: Fujitsu, a leading service company for technology, has transformed the way call centers solve problems—learning how to eliminate the underlying cause of current problems rather than fixing them again and again. An extremely successful car dealership has adopted lean principles to streamline its business, making for dramatically reduced wait time, fewer return trips, and greater satisfaction for customers—and a far more lucrative enterprise. *Lean Solutions* will inspire managers to take the first steps toward perfecting their company's process of giving consumers what they really want.

**Geriatric Diseases** Nages Nagaratnam, Kujan Nagaratnam, Gary Cheuk, 2017 This volume provides a comprehensive overview of the unique clinical entities of diseases in older patients. The book arranges the organ systems in 21 sections, which include over 100 collective chapters on various age-related diseases in these organ systems. The text is specifically designed for ease-of-use and include learning tools that include multiple choice, short answer, and extended matching questions, case vignettes, self-assessments, and rich tables and illustrations. Each section includes a review of the anatomy, physiology and pathology that are specific to aging patients. The text covers the complex factors that present diagnosis challenges, including the interaction of the disease process with co-existing morbidities, aged- related physiological changes and pre-existing functional challenges and psychosocial circumstances. The text also works with the previously published text *Diseases in the Elderly: Age-Related Changes and Pathophysiology*, which is tailored to complement this resource. Written by experts in the field, *Geriatric Diseases: Clinical Expression, Management and Impact* is the ultimate guide on clinical expression and management of diseases in the elderly for medical students, residents, fellows, geriatricians, gerontologists,

primary care physicians, internal medicine specialists, emergency room physicians, specialist nurses, and all other physicians and medical professionals treating older patients.

**Temperament in Childhood** Geldolph A. Kohnstamm, John E. Bates, Mary Klevjord Rothbart, 1995-06-08 This authoritative book addresses major topics in childhood temperament in such areas as concepts and measures, biological bases of individual differences in temperament, developmental issues, applications of temperament research in clinical and educational settings, sociocultural and other group factors as well as historical perspectives. Each section begins with a major chapter by one of the editors, followed by shorter contributions written by active researchers in the field.

*Methodology Of Frontal And Executive Function* Patrick Rabbitt, 2004-08-02 This volume reflects the pressure to develop useful models and methodologies to study executive behaviour - the ability to update information in working memory in order to control selective attention to formulate plans of action and to monitor their efficient execution. Many models are based on the concept of a single central executive that manages these functions; others propose a number of independent working memory systems that each serve one task or activity but not others.; This book is a collection of essays by active researchers who discuss their own work on the definition of executive or controlled behaviours, and on the relation of these behaviours to specific areas of the frontal cortex. The papers are particularly concerned with logical difficulties that arise in defining these functions that lead, in turn, to methodological difficulties in studying them. In particular, they discuss such problems as the low test-re-test reliability of tasks that have been used to define and explore executive behaviours, the limited validity of these tasks in predicting performance deficits, the poor localization of the changes observed with respect to underlying brain function, and the relation of performance on these tasks to individual difference in performance on measures of global or general intellectual ability such as Spearman's 1927 gf.; The authors discuss their own research on the relations between cognitive function and neuropsychology, on changes in executive competence in conditions such as closed head injuries or dementias that may diffusely affect the whole brain, and on changes in executive function in normal old age.

**Peanuts** Thomas Stalker, Richard F. Wilson, 2015-12-29 Peanuts: Genetics, Processing, and Utilization (Oilseed Monograph) presents innovations in crop productivity and processing technologies that help ensure global food security and high quality peanut products. The authors cover three central themes, modern breeding methods for development of agronomic varieties in the U.S., China, West Central Africa, and India, enhanced crop protection and quality through information from the peanut genome sequence, and state-of-the-art processing and manufacturing of products in market environments driven by consumer perception, legislation, and governmental policy. - Discusses modern breeding methods and genetically diverse resources for the development of agronomic varieties in the U.S., China, India, and West Central Africa - Provides enhanced crop protection and quality through the application of information and genetic tools derived from analysis of the peanut genome sequence - Includes state-of-art processing and manufacture of safe, nutritious, and flavorful

food products

**The Equity Myth** Frances Henry, Enakshi Dua, Carl E. James, Audrey Kobayashi, Peter Li, Howard Ramos, Malinda S. Smith, 2017-06-09 The university is often regarded as a bastion of liberal democracy where equity and diversity are promoted and racism doesn't exist. In reality, the university still excludes many people and is a site of racialization that is subtle, complex, and sophisticated. While some studies do point to the persistence of systemic barriers to equity in higher education, in-depth analyses of racism, racialization, and Indigeneity in the academy are more notable for excluding racialized and Indigenous professors. This book is the first comprehensive, data-based study of racialized and Indigenous faculty members' experiences in Canadian universities. Challenging the myth of equity in higher education, it brings together leading scholars who scrutinize what universities have done and question the effectiveness of their equity programs. They draw on a rich body of survey data, interviews, and analysis of universities' stated policies to examine the experiences of racialized faculty members across Canada who - despite diversity initiatives in their respective institutions - have yet to see meaningful changes in everyday working conditions. They also make important recommendations as to how universities can address racialization and fulfill the promise of equity in higher education.

**The Australian Temperament Project** Suzanne Vassallo, Ann Sanson, 2013 This report highlights some of the key learnings about human development from the Australian Temperament Project (ATP) - a groundbreaking longitudinal study that, to date, has followed a large group of Victorians from their birth to age 30 years. ATP is a joint project between the Australian Institute of Family Studies, the Royal Children's Hospital, the University of Melbourne and Deakin University and is one of only a few in the world with information on three generations of study members - the young people, their parents, and now the young people's own children.

**Invasive Species and Global Climate Change** Lewis H. Ziska, Jeffrey S. Dukes, 2019-10-23 Taking a global perspective, this book examines what will happen to invasive species, including plants, animals and pathogens, with current and expected man-made climate change.

*Principles of Seed Science and Technology* Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Fourth Edition of *Principles of Seed Science and Technology*, like the first three editions, is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds. The first nine chapters present the seed as a biological system and cover its origin, development, composition, function (and sometimes nonfunction), performance and ultimate deterioration. The last nine chapters present the fundamentals of how seeds are produced, conditioned, evaluated and distributed in our modern agricultural society. Two new chapters have been added in this fourth edition, one on seed ecology and the second on seed drying. Finally, revisions have been made throughout to reflect changes that have occurred in the seed industry since publication of the Third Edition. Because of the fundamental importance of seeds to both

agriculture and to all of society, we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves. We hope that this feeling will be communicated to our readers. Furthermore, we have attempted to present information in a straight-forward, easy-to-read manner that will be easily understood by students and lay persons alike. Special care has been taken to address both current state-of-the-art as well as future trends in seed technology.

**Creating a Lean Culture** David Mann, 2005-05-13 2006 SHINGO PRIZE for EXCELLENCE in MANUFACTURING RESEARCH Lean production has been proven unbeatable in organizing production operations, yet the majority of attempts to implement lean end in disappointing results. The critical factor so often overlooked is that lean implementation requires day-to-day, hour-by-hour management practices and skills that leaders in conventional batch-and-queue environments are neither familiar nor comfortable with. Creating a Lean Culture helps lean leaders succeed in their personal batch-to-lean transformation. It provides a practical guide to implementing the missing links needed to sustain a lean implementation. Mann provides critical guidance on developing and using the key elements of a lean management system, including: leader standard work, visual controls, daily accountability processes, maintaining a process focus, managing key HR issues, and much more. In addition, a questionnaire is included to help assess current management practices and monitor progress.

**Aversive Interpersonal Behaviors** Robin M. Kowalski, 2013-11-11 Aversive behaviors have greater influence on social interactions than is generally acknowledged, determining personal satisfaction, interpersonal attraction, choice of partners, and the course of relationships. What motivates aversive behaviors? To what extent do they obtain desired outcomes? In what ways are they unnecessary and destructive? How do other people respond, emotionally and behaviorally? These are just a few of the many interesting questions addressed by the 16 respected researchers who contribute to Aversive Interpersonal Behaviors. Nine chapters give this heretofore neglected subject the attention it is due, probing a dark side of interpersonal relationships to understand both its destructive and adaptive nature.

**Research Companion to the Dysfunctional Workplace** Janice Langan-Fox, Cary L. Cooper, Richard J. Klimoski, 2007 A work exposing and exploring the phenomena of the dysfunctional workplace is long overdue. This fascinating book does just that, uncovering the subversiveness, counter-productive behaviour and unspoken issues that managers struggle with on a daily basis. This Companion not only explores organizational dysfunction as it concerns individuals, it also examines broader issues of dysfunction and its effects with regards teams, managers and organizational systems. Lively discussion encompasses the symptoms of distress, illness, absenteeism, and inefficiency that point towards behavioural disorders and system-wide malfunction. From personality disorders to wars over territory, the book chronicles and reveals the true nature of often hidden workplace problems including bullying, unethical behaviour, loss of trust, organizational deviance, cowardice, workaholism, negative humour and emotions, personality disorders, mismanagement, and malfunctioning performance and

selection systems. So what can be done? Practical solutions to these dysfunctional phenomena are presented by international experts from a range of disciplinary backgrounds including management, psychology and economics. This fascinating, highly original book will be of enormous interest to students, researchers, academics and practitioners across all sectors of business and management, human resource management in particular.

*Environmental DNA* Pierre Taberlet, Aurélie Bonin, Lucie Zinger, Eric Coissac, 2018 Environmental DNA (eDNA) refers to DNA that can be extracted from environmental samples (such as soil, water, feces, or air) without the prior isolation of any target organism. The analysis of environmental DNA has the potential of providing high-throughput information on taxa and functional genes in a given environment, and is easily amenable to the study of both aquatic and terrestrial ecosystems. It can provide an understanding of past or present biological communities as well as their trophic relationships, and can thus offer useful insights into ecosystem functioning. There is now a rapidly-growing interest amongst biologists in applying analysis of environmental DNA to their own research. However, good practices and protocols dealing with environmental DNA are currently widely dispersed across numerous papers, with many of them presenting only preliminary results and using a diversity of methods. In this context, the principal objective of this practical handbook is to provide biologists (both students and researchers) with the scientific background necessary to assist with the understanding and implementation of best practices and analyses based on environmental DNA.

*Encyclopedia of Post-Colonial Literatures in English* Eugene Benson, L.W. Conolly, 2004-11-30 ... Documents the history and development of [Post-colonial literatures in English, together with English and American literature] and includes original research relating to the literatures of some 50 countries and territories. In more than 1,600 entries written by more than 600 internationally recognized scholars, it explores the effect of the colonial and post-colonial experience on literatures in English worldwide.

**The Developing Structure of Temperament and Personality From Infancy To Adulthood** Charles F. Halverson, Jr., Gedolph A. Kohnstamm, Roy P. Martin, Charles F. Halverson, Geldolph A. Kohnstamm, 2014-05-12 This book is the first to bring together researchers in individual differences in personality and temperament to explore whether there is any unity possible between the temperament researchers of infancy and childhood and the major researchers in adult personality. Prior to the workshop which resulted in this volume, the existing literature seemed to document a growing consensus on the part of the adult personality researchers that five major personality dimensions -- the Big Five -- might be sufficient to account for most of the important variances in adult individual differences in personality. In contrast to this accord, the literature on child and infant individual differences seemed to offer a wide variety of opinions regarding the basic dimensions of difference in personality or temperament. The editors believed that they could encourage researchers from both the adult and child areas to consider the importance of a lifespan conceptualization of individual differences by discussing their

research in terms of a continuity approach. Written by some of the most distinguished scholars from Great Britain, continental Western Europe, and Eastern Europe as well as the United States and Canada, the chapters present a cross-cultural view of both adult personality and temperament in infancy and childhood. By sharing their recent data, techniques, and theoretical speculations, the chapter authors communicate the research enthusiasm engendered by the growing consensus of the adult Big Five as well as the exciting prospects of an integrative program of research from infancy to adulthood that will clarify and consolidate what is now a disparate set of methods, theory, and findings across the lifespan. The editors suggest that this volume will have considerable heuristic value in stimulating researchers to conceptualize their work in developmental, lifespan approaches that will lead to a consolidation of individual differences research at every age.

**Social Exclusion** Paolo Riva, Jennifer Eck, 2016-07-26 From ostracism on the playground to romantic rejection, bullying at work, and social disregard for the aged, individuals are at constant risk of experiencing instances of social exclusion, including ostracism, rejection, dehumanization, and discrimination. These phenomena have a powerful impact as testified by their immediate influence on people's thoughts, emotions, and behaviors. *Social Exclusion: Psychological Approaches to Understanding and Reducing Its Impact* investigates different psychological approaches, across multiple psychological subdisciplines, to understanding the causes and consequences of social exclusion and possible ways to reduce or buffer against its negative effects. The purpose of this volume is threefold. First, it lays the groundwork for the understanding of social exclusion research; reviewing the different instances of social exclusion in everyday life and methods to experimentally investigate them. Second, this volume brings together different psychological approaches to the topic of social exclusion. Leading scholars from around the world contribute perspectives from social psychology, social neuroscience, developmental psychology, educational psychology, work and organizational psychology, clinical psychology, and social gerontology to provide a comprehensive overview of social exclusion research in different psychological subdisciplines. Taken together, these chapters are conducive to the important development of new and more integrative research models on social exclusion. Finally, this volume discusses psychological strategies such as emotion regulation, psychological resources, and brain mechanisms that can reduce or buffer against the negative consequences of social exclusion. From school shootings to domestic violence, from cognitive impairment to suicide attempts, the negative impact of social exclusion has been widely documented. Thus, from an applied perspective, knowing potential ways to mitigate the negative effects of social exclusion can have a significant positive influence on people's—and society's—well-being. Overall, this book provides the reader with the knowledge to understand the impact of social exclusion and with tools to address it across many different contexts. Importantly, *Social Exclusion: Psychological Approaches to Understanding and Reducing Its Impact* aims to bridge the gap between the approaches of different psychological subdisciplines to this topic, working towards a comprehensive, integrative model of social exclusion.

Challenging ICT Applications in Architecture, Engineering, and Industrial Design Education Wang, James, 2012-08-31 Are Information and Communications Technologies (ICTs) helpful or detrimental to the process of design? According to Aristotle, the imagination is a mental power that assists logical, sound judgments. Design, therefore, incorporates both reason and imagination. Challenging ICT Applications in Architecture, Engineering, and Industrial Design Education posits imagination as the central feature of design. It questions the common assumption that ICTs are not only useful but also valuable for the creation of the visual designs that reside at the core of architecture, engineering design, and industrial design. For readers who believe this assumption is right, this book offers an alternative perspective.

*Early Experience and Human Development* Theodore D. Wachs, Gerald E. Gruen, 2012-12-06 Our goal in writing this book was to fill a perceived gap in the early experience literature. Most existing volumes on early experience and development can be dichotomized on a basic versus an applied dimension. Volumes falling on the basic side are designed for researchers and theoreticians in the biomedical and behavioral sciences. Most existing basic volumes are either primarily based on infrahuman data or are based on single major human studies. In going over these volumes, we are not convinced of the generality of infrahuman data to the human level; in addition, we were concerned about the replicability of findings from single studies, however well designed these studies were. As a result, the relevance of data from these volumes to applied human problems is quite limited. In contrast, volumes falling on the applied side are designed primarily for those involved in intervention work with infants and young children. These applied books generally tend to be vague and nonempirical compilations of the views of experts and the collective wisdom of the ages. Rarely in applied volumes do we find conclusions based on solid, consistent, empirical findings.

SORCE Gary Rottman, 2002

Ethnobotany Gary J. Martin, 2014-07-29 Ethnoecology has blossomed in recent years into an important science because of the realization that the vast body of knowledge contained in both indigenous and folk cultures is being rapidly lost as natural ecosystems and cultures are being destroyed by the encroachment of development. Ethnobotany and ethnozoology both began largely with direct observations about the ways in which people used plants and animals and consisted mainly of the compilation of lists. Recently, these subjects have adopted a much more scientific and quantitative methodology and have studied the ways in which people manage their environment and, as a consequence, have used a much more ecological approach. This manual of ethnobotanical methodology will become an essential tool for all ethnobiologists and ethnoecologists. It fills a significant gap in the literature and I only wish it had been available some years previously so that I could have given it to many of my students. I shall certainly recommend it to any future students who are interested in ethnoecology. I particularly like the sympathetic approach to local peoples which pervades this book. It is one which encourages the ethnobotanical work by both the local people themselves and by academically trained researchers. A study of

this book will avoid many of the arrogant approaches of the past and encourage a fair deal for any group which is being studied. This manual promotes both the involvement of local people and the return to them of knowledge which has been studied by outsiders.
