Peer-assisted Learning Keith Topping,Stewart Ehly,1998-07-01 Peer Assisted Learning (PAL) involves children in school consciously assisting others to learn, and in so doing learning more effectively themselves. It encompasses peer tutoring, peer modeling, peer education, peer counseling, peer monitoring, and peer assessment, which are differentiated from other more general co-operative learning methods. PAL is not diluted or surrogate teaching; it complements and supplements (but never replaces) professional teaching--capitalizing on the unique qualities and richness of peer interaction and helping students become empowered democratically to take more responsibility for their own learning. In this book, PAL is presented as a set of dynamic, robust, effective, and flexible approaches to teaching and learning, which can be used in a range of different settings. The chapters provide descriptions of good practice blended with research findings on effectiveness. They describe procedures that can be applied to all areas of the school curriculum, and can be used with learners of all levels of ability, including gifted students, students with disabilities, and second-language learners. Among the distinguished contributors, many are from North America, while others are from Europe and Australia. The applicability of the methods they present is worldwide. Peer-Assisted Learning is designed to be accessible and useful to teachers and to those who employ, train, support, consult with, and evaluate them. Many chapters will be helpful to teachers aiming to replicate in their own school environments the cost-effective procedures described. A practical resources guide is included. This volume will also be of interest to faculty and researchers in the fields of education and psychology, to community educators who want to learn about the implications of Peer Assisted Learning beyond school contexts, and to employers and others involved in post-school training.

Strategic Reframing Rafael Ramirez,Angela Wilkinson,2016-03-24 Traditional strategy assumes stability and predictability. Today's world is better characterised by turbulence, uncertainty, novelty and ambiguity - conditions that

contribute disruptive changes and trigger the search for new ways of coping. This book aims to become the premier guide on how to do scenario planning to support strategy and public policy. Co-authored by three experts in the field, the book presents The Oxford Scenario Planning Approach (OSPA). The approach is both intellectually rigorous and practical. Methodological choices and theoretical aspects in practice are detailed in reference to the relevant literatures and grounded in 6 case studies the authors have been involved with. The book makes several contributions to the field, centred on how learning with scenario planning is supported by re-framing and re-perception; how this iterative process can be embedded in corporate or government settings, and how it helps those that it supports to do well in today's world. The book is written in an accessible style and will be a useful introductory text as well as a useful guide for the more experienced scenario planning practitioner and scholar.

Social and Emotional Prevention and Intervention Programming for Preschoolers Susanne A. Denham, Rosemary Burton, 2012-12-06 Social and Emotional Prevention and Intervention Programming for Preschoolers rests on the idea that young children, under optimal circumstances, develop substantial abilities in social and emotional domains by the time they enter school. These abilities contribute to their success and well-being during these early years, but even more importantly, to both their successful adaptation to school (personal and academic) and their long-term mental health. The chapters of this volume present theoretical foundations for and explanations of what important adults in young children's lives - preschool teachers, daycare providers, parents - can do to encourage the development of such social-emotional abilities, including promoting secure attachment relationships, providing positive behavior guidance, and assisting children in developing emotion knowledge, emotion regulation, social problem-solving skills, and other positive social behaviors. In addition, the book reviews the current state of early childhood programming in each of these crucial areas, with the addition of a chapter on emergent parent programming on emotion coaching. Recommendations are made for making such programming work, for assessing individual children's development and program efficacy, and necessary future directions for this area are detailed.

Advancing Gender Equality in Bangladesh Rieky Stuart, Aruna Rao, David Kelleher, Sheepa Hafiza, Carol Miller, Hasne Begum, 2017-07-14 In 1994, BRAC, the world's largest NGO, made headlines by putting women's rights centre stage in Bangladesh, one of the poorest countries in the world. The Gender Quality Action Learning (GQAL) Programme was one of the very first large-scale efforts to mainstream gender equality. Advancing Gender Equality in Bangladesh describes the history, implementation, and results of this major 20 year initiative and discusses what it teaches us about the fight to achieve gender equality outcomes. This in-depth analysis will be of considerable interest to students, researchers and development practitioners looking for new, more effective and practical ideas on how to promote equality and inclusion.

Environmental Governance Karl Hogl, E. Kvarda, R. Nordbeck, M Pregernig, 2012-01-01 'An imaginative and stimulating

collection of essays that makes an indispensable contribution to the literature on forest and environmental policy and governance.' - David Humphreys, the Open University, UK 'This is a very timely, relevant and interesting volume. Environmental problems are pertinent problems, as the book rightly states, so we need continuous attention and effort to analyse and apply environmental governance modes. Although urgently needed, their effectiveness and legitimacy are neither straight forward nor given. Therefore, a thorough in-depth analysis of these modes, their characteristics and their pros and cons is very helpful, both for academics and policy makers. This is exactly what this book offers.' - Bas Arts, Wageningen University and Research Centre, the Netherlands 'This excellent collection of articles by leading scholars in a variety of natural resource policy fields examines cases in participation, horizontal and vertical co-ordination, and the role of science and expertise in environmental policy formation. the legitimacy and effectiveness of each of these key components of governance and meta-governance regimes is assessed in important areas such as climate change and parks and wilderness preservation. the volume brings an admirable consistency of focus to the analysis of new governance modes in environmental policy and sheds new light upon important recent trends and developments in the area.' - Michael Howlett, Simon Fraser University, Canada Environmental policy making has become an experimental field for new modes of governance. This timely book focuses on three prominent characteristics of new governance arrangements: the broad participation of non-state actors, the attempt to improve vertical and horizontal coordination, and the effort to integrate different types of expertise in an effective and democratically accountable way. Building on the analytical perspectives of legitimacy and effectiveness, which are seen as genuine acid test criteria for new governance, this book provides a critical assessment of current practices of participation, coordination and evidence-based policy making in various case studies of environmental governance, in particular in the fields of biodiversity, climate and forest policy. the book provides insights from selected governance processes that go beyond consultancy-style best-practice examples but are embedded in a solid conceptual and theoretical discussion that will be invaluable to policymakers. It will also prove essential for scholars interested in environmental politics; policy studies; public policy; public administration; European politics; as well as science and technology studies.

Commuting Stress Meni Koslowsky,Avraham N. Kluger,Mordechai Reich,2013-06-29 Several people have asked what motivated us to write a book about commuting, something that we all do but over which we have very little control. As a matter of fact, the general reaction from professional colleagues and friends alike was first a sort of knowing smile followed by some story. Everyone has a story about a personal commuting experience. Whether it was a problem with a delayed bus, a late arrival, broken-down automobiles, hot trains or subways, during the past year we have heard it all. Many of these stories must be apocryphal because, if they were all true, it is amazing that anyone ever arrived at work on time, at home, or at some other destination. The interest for us likely stems from many factors that over the years have probably influenced our thinking. All of the authors studied and/or grew up in the New York City metropolitan area. For illustration, let's devote a few

paragraphs to describing some of the senior author's (Koslowsky's) life experiences. As a young man in New York City, he was a constant user of the New York City subway system. The whole network was and still is quite impressive. For a relatively small sum, one can spend the whole day and night in an underground world (growing up in New York often makes one think that the whole world is contained in its five boroughs).

Emotional and Behavioral Problems Paul Zions, Laura Zions, Richard L. Simpson, 2016-05-10 A guide to teaching students with emotional and behavioral problems.

Winning the Uncertainty Game Jan Oliver Schwarz, Daniel F. Oriesek, 2020-12-30 This book is about the challenges that emerge for organizations from an ever faster changing world. While useful at their time, several management tools, including classic strategic planning processes, will no longer suffice to address these challenges in a timely and comprehensive fashion. While individual management tools are still valid to solve specific problems, they need to be employed based on a clear understanding of what the greater challenge is and how they need to be combined and prioritized with other approaches. In order to do so, companies can apply the clarity of thinking from the military with regard to which leadership level is responsible for what and how these levels need to interact in order to produce a single aligned response to an outside opportunity or threat. Finally, the tool of business wargaming, while known for some time, proves to be an ideal approach to quickly and effectively bring all leadership levels together, align them around a common objective and lay the groundwork for effective implementation of targeted responses that will keep the organization competitive and in the game for the long run. The book offers a comprehensive introduction to business wargaming, including a historical account, a classification of different types of games and a number of specific real-world examples. This book is targeted at practicing managers dealing with the aforementioned challenges, as well as for students of business and strategy at every level.

Young Minds in Social Worlds Katherine Nelson, 2010-03-30 Katherine Nelson re-centers developmental psychology with a revived emphasis on development and change, rather than foundations and continuity. She argues that children be seen not as scientists but as members of a community of minds, striving not only to make sense, but also to share meanings with others. A child is always part of a social world, yet the child's experience is private. So, Nelson argues, we must study children in the context of the relationships, interactive language, and culture of their everyday lives. Nelson draws philosophically from pragmatism and phenomenology, and empirically from a range of developmental research. Skeptical of work that focuses on presumed innate abilities and the close fit of child and adult forms of cognition, her dynamic framework takes into account whole systems developing over time, presenting a coherent account of social, cognitive, and linguistic development in the first five years of life. Nelson argues that a child's entrance into the community of minds is a slow, gradual process with enormous consequences for child development, and the adults that they become. Original, deeply scholarly, and trenchant, *Young Minds in Social Worlds* will inspire a new generation of developmental psychologists.

First Islanders Peter Bellwood,2017-04-10 Incorporating research findings over the last twenty years, *First Islanders* examines the human prehistory of Island Southeast Asia. This fascinating story is explored from a broad swathe of multidisciplinary perspectives and pays close attention to migration in the period dating from 1.5 million years ago to the development of Indic kingdoms late in the first millennium CE.

Health System Performance Comparison: an Agenda for Policy, Information and Research Irene Papanicolas,Peter Smith,2013-06-16 International comparison of health system performance has become increasingly popular, made possible by the rapidly expanding availability of health data. It has become one of the most important levers for prompting health system reform. Yet, as the demand for transparency and accountability in healthcare increases, so too does the need to compare data from different health systems both accurately and meaningfully. This timely and authoritative book offers an important summary of the current developments in health system performance comparison. It summarises the current state of efforts to compare systems, and identifies and explores the practical and conceptual challenges that occur. It discusses data and methodological challenges, as well as broader issues such as the interface between evidence and practice. The book draws out the priorities for future work on performance comparison, in the development of data sources and measurement instruments, analytic methodology, and assessment of evidence on performance. It concludes by presenting the key lessons and future priorities, and in doing so offers a rich source of material for policy-makers, their analytic advisors, international agencies, academics and students of health systems.

Personality at Work Adrian Furnham,2002-09-11 *Personality at Work* examines the increasingly controversial role of individual differences in predicting and determining behaviour at work. It asks whether psychological tests measuring personality traits can predict behaviour at work, such as job satisfaction, productivity, as well as absenteeism and turnover. Importantly, it is a critical and comprehensive review of that literature from psychology, sociology and management science which lies at the interface of personality theory, occupational psychology and organizational behaviour. Drawing on a vast body of published material, Adrian Furnham describes for the first time current state of knowledge in this area. The result is a volume which will be an enormously useful resource to the researcher and practitioner, as well as students of psychology, management science and sociology. *Personality at Work* is the only exhaustive and incisive multi-disciplinary work to assess the role of psychological testing in the management of the work place.

Rational Numbers Thomas P. Carpenter,Elizabeth Fennema,Thomas A. Romberg,2012-10-12 Until recently there had been relatively little integration of programs of research on teaching, learning, curriculum, and assessment. However, in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment. The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain.

Integrating a number of different research perspectives is a complex task, and ways must be found to reduce the complexity without sacrificing the integration. The research discussed in this volume is tied together because it deals with a common content strand. During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children. The areas of addition and subtraction, algebra, rational numbers, and geometry are notable examples. Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching, learning, curriculum, and assessment is an open question. The perspectives presented in this volume illustrate the potential for adopting this perspective.

The Social Basis of Health and Healing in Africa Steven Feierman, John M. Janzen, 1992-09-22 These essays are an account of disease, health and healing practices on the African continent. The contributors all emphasize the social conditions linked to ill health and the development of local healing traditions, from Morocco to South Africa and from the precolonial era to the present.

Mathematical Difficulties Ann Dowker, 2008 This book examines the mathematical difficulties in typical and atypical populations. It discusses the behavioural, educational and neuropsychological characteristics of people with mathematical difficulties, and educational interventions to prevent, diagnose, treat or ameliorate such difficulties. The book brings together studies from different disciplines, including developmental psychology, neuroscience and education, and includes perspectives from practicing teachers. The book is divided into three major sections. The first includes chapters about the nature and characteristics of mathematical difficulties in the population as a whole, in relation to both psychology and education. The second deals with mathematical difficulties in children with other problems such as specific language impairment and dyslexia. The third discusses methods of interventions aimed at preventing, treating or ameliorating mathematical difficulties, and will include discussions of assessment and diagnosis.
