**Tennis Medicine** Giovanni Di Giacomo, Todd S. Ellenbecker, W. Ben Kibler, 2019-01-08 This book will serve as a key resource for all clinicians working in orthopedics, sports medicine, and rehabilitation for the sport of tennis. It provides clinically useful information on evaluation and treatment of the tennis player, covering the entire body and both general medical and orthopedic musculoskeletal topics. Individual sections focus on tennis-related injuries to the shoulder, the elbow, wrist, and hand, the lower extremities, and the core/spine, explaining treatment and rehabilitation approaches in detail. Furthermore, sufficient sport science information is presented to provide the clinical reader with extensive knowledge of tennis biomechanics and the physiological aspects of training and rehabilitation. Medical issues in tennis players, such as nutrition and hydration, are also discussed, and a closing section focuses on other key topics, including movement dysfunction, periodization, core training, and strength and conditioning specifics. The expansive list of worldwide contributors and experts coupled with the comprehensive and far-reaching chapter provision make this the highest-level tennis medicine book ever published.

**The Next Generation of Solution Focused Practice** Mark McKergow, 2021-04-12 The Next Generation of Solution Focused Practice shows how practitioners help create change by 'stretching the world' of their clients. The book brings new ideas from enactive cognition which show how skilled attention on the client and their words is important both practically and conceptually. It provides both a summary of the development of Solution Focused Brief Therapy (SFBT) over time and how the latest developments form a newly coherent form of practice based on developing descriptions. The author has structured the book using simple and easy to understand metaphors to paint a rich, creative, and visual picture of therapy for

the reader, which makes it an accessible read. This book will be of interest to a wide range of SF practitioners internationally, as well as to those involved in coaching, counselling, family therapy, education, social work, healthcare and organisational change.

Inherited Metabolic Diseases Georg F. Hoffmann, Johannes Zschocke, William L. Nyhan, 2009-11-21 The explosion of insights in the field of metabolic disease has shed new light on diagnostic as well as treatment options. 'Inherited Metabolic Disease - A Clinical Approach' is written with a reader-friendly consistent structure. It helps the reader to find the information in an easily accessible and rapid way when needed. Starting with an overview of the major groups of metabolic disorders it includes algorithms with questions and answers as well as numerous graphs, metabolic pathways, and an expanded index. Clinical and diagnostic details with a system and symptom based are given to facilitate an efficient and yet complete diagnostic work-up of individual patients. Further, it offers helpful advice for emergency situations, such as hypoglycemia, hyperammonemia, lactic acidosis or acute encephalopathy. Five different indices allow a quick but complete orientation for common important constellations. Last but not least, it has an appendix with a guide to rapid differential diagnosis of signs and symptoms and when not to suspect metabolic disease. It will help physicians to diagnose patients they may otherwise fail to diagnose and to reduce unnecessary referrals. For metabolic and genetic specialists especially the indices will be helpful as a quick look when being called for advice. It has all it needs to become a gold standard defining the clinical practice in this field.

*Imperialism and Medicine in Bengal* Poonam Bala, 1991 This book assesses the impact of imperial policies on the medical profession in Bengal during colonial rule and covers the period 1800-1947. Dr. Poonam Bala first discusses the Indigenous medical systems which prevailed in ancient and medieval India. She examines the relationship between the ruling powers and the practitioners of the Ayurveda and Unani systems which were, on the whole, positive and led to the growth of both these medical systems under royal patronage. With the advent of British rule in Bengal this relationship began to change. The major part of the author's analysis is concerned with the Bengali experience of colonial administration and Western

medicine as the last major challenge to the indigenous medical systems. The period under study was one in which Western medical science was changing rapidly and becoming increasingly professional: The attempt to impose a similar pattern on the Indian systems of medicine led eventually to a conflict of interest between the two, instead of the peaceful co-existence which had prevailed at first. By the end of the nineteenth century, advances in Western medicine had undermined and eroded the similarities in approach and practice which had earlier made extensive cooperation at least a possibility. Dr. Bala discusses this attempt of the Western system to assert hegemony over its indigenous counterparts in Bengal, especially by trying to root itself in the emergent English-speaking elite--the Bhadrak. However, in the final analysis, this effort did not succeed completely because of the great social and religious differences between the two cultures. Thus, although, state policies were formulated to serve British commercial and administrative interests, these could never quite overwhelm the interests of the indigenous population or the medical practitioners who served them. Ultimately, according to the author, medical practices in the period under study have to be understood in terms of both competition and accommodation in the context of a general trend towards the professionalisation and commercialisation of medicine. A book which will command attention not only in departments of medicine but also among anthropologists, historians, political scientists and sociologists.

The Ecology of Fungal Entomopathogens Helen E. Roy, Fernando E. Vega, Mark S. Goettel, Dave Chandler, Judith K. Pell, Eric Wajnberg, 2010-02-04 Understanding of the ecology of fungal entomopathogens has vastly increased since the early 1800's, but remains challenging. The often complex interactions between pathogen and host are being unravelled through eloquent research and the importance of the often subtle interactions, in determining the success or failure of biological control, cannot be underplayed. The realm of ecology is vast and deciphering insect-fungal pathogen interactions within an ecological context will take us on voyages beyond our imagination. This book brings together the work of renowned scientists to provide a synthesis of recent research on the ecology of fungal entomopathogens exploring host-pathogen dynamics from the context of biological control and beyond. Dr. Helen Roy leads zoological research in the Biological Records Centre at the NERC Centre for Ecology & Hydrology, UK. The focus of her research is insect community interactions with particular emphasis on the effects of environmental change. She has been working on the ecological interactions between fungal entomopathogens and their hosts for 15 years; this continues to be a source of fascination. She has been an associate editor of *BioControl* since 2006. Dr. Dave Chandler is an insect pathologist at the University of Warwick, UK. He has studied entomopathogenic fungi for just over 20 years. He has particular interests in entomopathogenic fungi as biocontrol agents of horticultural crops, fungal physiology and ecology, and the pathogens of honeybees. Dr. Mark Goettel is an insect pathologist at the Lethbridge Research Centre of Agriculture & Agri-Food Canada, specializing in the development of fungal entomopathogens as microbial control agents of insects. In addition to this research, he has been extensively involved in the review and revision of the regulations for registration of microbial control agents and has addressed regulatory and safety

issues at the international level. He is currently President of the Society for Invertebrate Pathology and has been Editor-in-Chief of Biocontrol Science & Technology since 2000. Dr. Judith K. Pell heads the Insect Pathology Group in the Department for Plant and Invertebrate Ecology at Rothamsted Research, UK. She leads research on the ecology of fungal entomopathogens, to elucidate their role in population regulation and community structure and to inform biological control strategies. Specifically: intraguild interactions; the relationships between guild diversity, habitat diversity and ecosystem function; pathogen-induced host behavioural change. Dr. Eric Wajnberg is a population biologist specialising in behavioural ecology, statistical modelling and population genetics. He is also an expert in biological control, with more than 20 years experience of working with insect parasitoids. He has been the Editor in Chief of BioControl since 2006. Dr. Fernando E. Vega is an entomologist with the United States Department of Agriculture, Agricultural Research Service, in Beltsville, Maryland, USA. He conducts research on biological methods to control the coffee berry borer, the most important insect pest of coffee throughout the world. He is co-editor, with Meredith Blackwell, of *Insect-Fungal Associations: Ecology and Evolution*, published by Oxford University Press in 2005, and serves as an Editorial Board Member for *Fungal Ecology*.

**Diagnosis: Philosophical and Medical Perspectives** N. Laor, J. Agassi, 2012-12-06 1. GENERAL The term diagnostics refers to the general theory of diagnosis, not to the study of specific diagnoses but to their general framework. It borrows from different sciences and from different philosophies. Traditionally, the general framework of diagnostics was not distinguished from the framework of medicine. It was not taught in special courses in any systematic way; it was not accorded special attention: students absorbed it intuitively. There is almost no comprehensive study of diagnostics. The instruction in diagnosis provided in medical schools is exclusively specific. Clinical instruction includes (in addition to vital background information, such as anatomy and physiology) specific instruction in nosology, the theory and classification of diseases, and this includes information on diagnoses and prognoses of diverse diseases. What is the cause of the neglect of diagnostics, and of its integrated teaching? The main cause may be the prevalence of the view of diagnostics as part-and-parcel of nosology. In this book nosology is taken as a given, autonomous field of study, which invites almost no comments; we shall freely borrow from it a few important general theses and a few examples. We attempt to integrate here three studies: 1) of the way nosology is used in the diagnostic process; 2) of the diagnostic process as a branch of applied ethics; 3) of the diagnostic process as a branch of social science and social technology.

Ayurveda in The New Millennium D. Suresh Kumar, 2020-11-10 Ayurveda or the sacred knowledge of longevity has been practiced in India and many Asian countries since time immemorial. Interest in Ayurveda started growing all over the world in the late 1970s, following the Alma Ata Declaration adopted by the W.H.O. in 1978. *Ayurveda in the New Millennium: Emerging Roles and Future Challenges* attempts to survey the progress made in this field and to formulate a course of action to take Ayurveda through the new millennium. It also identifies the many stumbling blocks that need to be removed if

Ayurveda is to cater to the needs of a wider audience. Features: Newer insights into the history of Ayurveda Regulatory aspects of the manufacture of ayurvedic medicines Industrial production of traditional ayurvedic medicines Quality control The scientific rationale of single herb therapy Biological effects of ayurvedic formulations Optimization of ancient wisdom and newer knowledge Conservation of threatened herbs Nutraceuticals and cosmeceuticals from Ayurveda Critical view of Ayurveda in the West Direction for the Ayurveda renaissance Ayurveda in the New Millennium: Emerging Roles and Future Challenges describes the strength of Ayurveda and how to usher in the Ayurveda renaissance. This book will be of interest to proponents of Ayurveda and all branches of traditional and alternative medicine. Experts from the fields of medicine, pharmacology, new drug discovery and food technology will also find it useful.

Heritage Futures Rodney Harrison,2020-07-28 Preservation of natural and cultural heritage is often said to be something that is done for the future, or on behalf of future generations, but the precise relationship of such practices to the future is rarely reflected upon. Heritage Futures draws on research undertaken over four years by an interdisciplinary, international team of 16 researchers and more than 25 partner organisations to explore the role of heritage and heritage-like practices in building future worlds. Engaging broad themes such as diversity, transformation, profusion and uncertainty, Heritage Futures aims to understand how a range of conservation and preservation practices across a number of countries assemble and resource different kinds of futures, and the possibilities that emerge from such collaborative research for alternative approaches to heritage in the Anthropocene. Case studies include the cryopreservation of endangered DNA in frozen zoos, nuclear waste management, seed biobanking, landscape rewilding, social history collecting, space messaging, endangered language documentation, built and natural heritage management, domestic keeping and discarding practices, and world heritage site management.

*Repeatable Battery for the Assessment of Neuropsychological Status* Christopher Randolph,1998

**Affective Neuroscience in Psychotherapy** Francis Stevens,2021-09-27 Most psychological disorders involve distressful emotions, yet emotions are often regarded as secondary in the etiology and treatment of psychopathology. This book offers an alternative model of psychotherapy, using the patient's emotions as the focal point of treatment. This unique text approaches emotions as the primary source of intervention, where emotions are appreciated, experienced, and learned from as opposed to being regulated solely. Based on the latest developments in affective neuroscience, Dr. Stevens applies science-based interventions with a sequential approach for helping patients with psychological disorders. Chapters focus on how to use emotional awareness, emotional validation, self-compassion, and affect reconsolidation in therapeutic practice. Interventions for specific emotions such as anger, abandonment, jealousy, and desire are also addressed. This book is essential reading for clinicians practicing psychotherapy, social workers and licensed mental health counselors, as well as anyone interested in the emotional science behind the brain.

Procrastination and Task Avoidance Joseph R. Ferrari, Judith L. Johnson, William G. McCown, 2014-01-15

**(En)Countering Native-speakerism** Adrian Holliday, Pamela Aboshiha, Anne Swan, 2014-01-14 The book addresses the issue of native-speakerism, an ideology based on the assumption that 'native speakers' of English have a special claim to the language itself, through critical qualitative studies of the lived experiences of practising teachers and students in a range of scenarios.

**Adolescents' Health** Inge Seiffge-Krenke, 2019-01-22 This book is devoted to identifying the precursors of adolescents' health problems and risk taking behaviors and the developmental processes that accompany them. It presents data on lay conceptions of health and illness, physical maturity, causes of mortality and morbidity, and patterns of utilization of medical and psychosocial health care services. Developmental changes in risk perception, self-disclosure behavior, and in dealing with nudity are linked with doctor-patient communication to illustrate the typical obstacles health experts are faced with when trying to assess diagnostic information in this age group. Developmental barriers that hinder adolescents' compliance are highlighted and factors accounting for their aversion to counseling are reviewed. This book also presents findings on typical stressors occurring during adolescence and their effect on health status as well as factors mediating the effect of stress on health. Throughout, readers gain valuable insight into gender differences, physical and psychological symptoms, and help-seeking behaviors. Special attention is directed to deficits in coping behavior, social support, and network structure of distressed adolescents and the current state of research relative to coping with chronic illness in adolescence is reviewed. Implications of these findings for the development of intervention strategies or for improving the health care of chronically ill adolescents and particularly troubled adolescents are detailed. This volume will appeal to clinical and school psychologists, psychiatrists, physicians, counselors or other healthcare professionals working with adolescents as well as researchers in the field of adolescent health. It also serves as a text in graduate level courses on adolescent health, psychopathology, and developmental pediatrics.
